

Unravel the Mystery of Mobile Device Data

At Relativity, our mission is to help teams organize data, discover the truth, and act on it, which is why we are excited to introduce the new integration between RelativityOne and Cellebrite Physical Analyzer + Legalview. This new connection built by Cellebrite delivers a seamless integration to RelativityOne customers, helping their organizations input and analyze data faster.

One of the fastest growing sources of data, mobile devices store more text messages and chat application messages every day, and with frequent software updates, create tedious work for teams when import scripts become invalid. With this new integration between Cellebrite and Relativity, customers can leverage ongoing updates to ensure compatibility with iOS and Android advancements and save time and money by automatically converting mobile data into Relativity's short message format (RSMF) for processing and easy viewing.

Integration Key Features:

Accelerate the time to review with automated conversion and data transfer.

Minimize human error and improve security with seamless integration between platforms.

Perform end-to-end e-discovery for mobile data collection and review.
